

Appln. No.: 10/501,564
 Amendment Dated: December 13, 2005
 Reply to Office Action of: September 13, 2005

MAT-8574US

Amendments to the Specification:

Please replace the paragraph, beginning at page 4, line ¹³12, with the following rewritten paragraph:

8-28-05
TM

~~The present invention has, i~~In a mobile communication system using a mobile IP, a mobile terminal determines a main home agent and a main home address. When the mobile terminal moves to a network different in service form, a home address (sub-home address) for use on a domain network which is different in service form (i.e., moved-in network domain) is registered as a primary care of address to the main home agent. When accessed ~~from the~~ externally, by using the main home address, even ~~in case when~~ the mobile terminal roams between domain networks and is assigned with a different home address, external communication is available by using the main home address. Also, where ~~using DNS is used,~~ to registering the main home address to eliminates the necessity of each registration of a local home address (sub-home address) change caused by roaming between domain networks, making it is possible to cope with swift movement of the mobile terminal.

Please replace the paragraph, beginning at page ⁵A, line ²26, with the following rewritten paragraph:
